

About the job

Company Description

OT-Marketplace helps organizations in various industries including IT & ITES, E-commerce, Retail, Real-Estate, Finance, Manufacturing, Engineering, Healthcare, and Pharma, optimize and consolidate their L&D spend. We empower L&D and HR teams by providing a platform to effectively select learning services from over 5000 vendors across 10+ key categories. Our AI-enabled search module, data analysis, and automated workflows ensure faster and precise identification of the right learning intervention. Our customers include fortune-500 organization as well as unicorn startups.

About the Project

It is a new project we are starting for which we are building the team from scratch. The project is focused on building AI Workforce (AI Teammates) powered by multi-agent system in the HR category.

Role Description

You will be involved in rapid prototyping of AI applications and wear different hats such as front-end / back-end designer and developer, product manager and AI Engineer. As we scale, you will be responsible for hiring and evolving the team into specialized ones.

Who will fit in

Someone who has been working as a full-stack developer while also tinkering with AI Applications on their own. Someone who is focused on solving the problem at hand and not stuck with the choice of technology and while they can handle breadth they are equally comfortable getting into the depth.

Qualifications

- 2-4 years of experience in building end-to-end applications as Full-Stack Developer
- Strong in Algorithms and Software Development Principles
- Hands-on experience in designing and developing AI applications with LLMs and ecosystem (promoting, fine-tuning, Vector-DB, Agentic Architecture / Multi-agent systems)
- Strong problem-solving skills
- Passionate for start-ups and believer in non-linear growth
- Strong entrepreneurial bent of mind
